To make your flying Christmas tree -
Fold line 1 with printed side away from you.

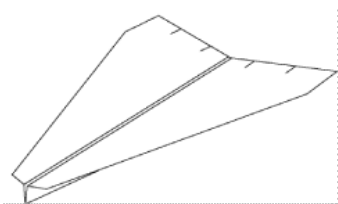

Fold the right side over again and crease along fold line 2.

Fold the tip down toward you and crease along fold line 3.

Now, flip the paper over. Then, fold the left side over onto the right side and crease along fold line 4 so that the outside edges of the wings line up.

Fold the wings down along fold lines 5.

Pro tip - Cut two slits, one inch apart, along the back edge of each wing for elevator adjustments.
